4000m² Industrial Floor Upgrade In 15 Days

A 4000m² floor in a 50-year-old factory at Clydebank, Glasgow, was upgraded in 15 days by CG Flooring Systems (CGFS) to provide a smooth, attractive surface for a new Booker cash-and-carry outlet.

The factory was acquired by Bookers for the company's fourth outlet in the Glasgow area. The floor was in a poor state of repair, with failing expansion joints, potholes, pitting and dozens of fixing bolts protruding above the surface. Booker

required a smooth surface suitable for hand trolleys and a smart finish.

After removing the fixing bolts and making good any large potholes, CGFS shot-blasted the floor to remove loose material and contamination and to provide a key for the primer and sealer coats.

The company's own **FastFloor-IT** cementitious screed was then poured to a depth of 5mm at an average rate of 1000m² a day to produce a smooth, durable surface. Once the screed had cured, expansion joints were re-cut to coincide with the original joints and a light grey colour coating was applied by roller to provide an attractive, dust-free finish which would be easy to keep clean.

The project involved CGFS personnel 15 days in total on site.
