

THE PUMPABLE FAST-TRACK TERRAZZO SYSTEM

“Terrazzo is a process where coloured aggregates are set into a fine coloured concrete and polished to a smooth finish.”

Traditionally a terrazzo floor finish has been achieved using factory produced tiles that are laid on a thick mortar bed and then polished;

...but even tradition cannot stop the path of progress.

CG Flooring Systems' **Fastraz**[®], a pumpable cementitious fast-track terrazzo flooring system, proves that progress has been made!

...is designed specifically for rapid application to floors where programme time is critical; but the end result must be of premium quality.

...is extremely tough*; is highly cost effective, yet is architecturally and aesthetically very pleasing.

...is solvent free, taint free, virtually odourless and is environmentally friendly; therefore is equally as suitable for refurbishment as it is for new-build.

* Abrasion resistance achieves 'AR1' Class under BS8204-2:1999 - Heavy Duty.

Why choose the

TERRAZZO SYSTEM

from

Operation	Material	Material
	Traditional Tiling	New Fastraz
Substrate Surface Preparation	✓	✓
Supply and Lay Mortar Bed	✓	No Bedding Required
Application Method	Hand	Pump
Thin Section Application	X	✓ (Min 7mm)
Area Layable per Day	200sq.m	1000sq.m
Intermediate Joint Grouting	✓	No Intermediate Joints
Structural Movement Joints	✓	✓
Next Day Sealing and Polishing	X	✓
Early Hand-Over	X	✓

Its hard to beat  **SYSTEM**
for **Speed, Efficiency, Cost & Style!**
