

The Pump-Applied Fast-Track Terrazzo System

‘Fastraz[®]’ Screed Colours

Base Screed Colours available:

White, Cream, Buff, Red, Green, Light Grey, Mid Grey, Charcoal.

Aggregate Colours available:

A range of 14 natural stone colours ranging from White to Black. As all the aggregates used are from natural sources, colour variations will be noted.

Aggregate Distribution:

As aggregate distribution on a Fastraz[®] floor is a Manual process, variations in the quantity of exposed aggregate will be noted. This is a characteristic of the Fastraz[®] pump-applied Terrazzo system.

Perceived Colours:

Using lighter or darker aggregate colours on the same base screed can significantly alter the perceived hue of the Fastraz[®] floor, as will the mixing of aggregate colours and varying their mix percentages.

Colour Consistency:

To ensure good colour consistence for each project undertaken, all materials are ordered and manufactured on a project by project basis.

Light Reflectivity:

Light coloured Base Screeds with light coloured aggregates give the Fastraz[®] floor the best light reflectivity.

Colour Stability:

Although every effort is made to use the most stable of pigments in the base screed and the use of natural stone for the aggregates, long term exposure to bright sunlight may cause some colour fading of the Fastraz[®] floor.
